SPECIALIST DIAGNOSTIC
RADIOLOGISTS

Tektrotyd Scan (also known as Octreotide scan) Preparation Requirements

Total duration of study: 24 hours.

Scanning time: Images at 1, 4 and 24 hours post injection.

Pregnancy: Contraindicated.

Breast feeding: Stopped. Mothers are advised to express milk prior to study.

Medication: Octreotide or somatostatin treatment needs to be stopped for a minimum of 2 weeks (for short acting treatment) and a maximum of 4 weeks (for long acting treatment) before the study. Kindly have your clinician speak directly with the Nuclear Medicine Department or Nuclear physician for full preparation.

Biochemistry: Rising specific tumor markers.

Previous studies: All radiology and histology required.

Diet: No specific diet. Eat as usual. Bring a snack for duration of study.

Allergy: None.

Hydration: Patient is encouraged to drink water prior and during study.
